PEDRASVERDE

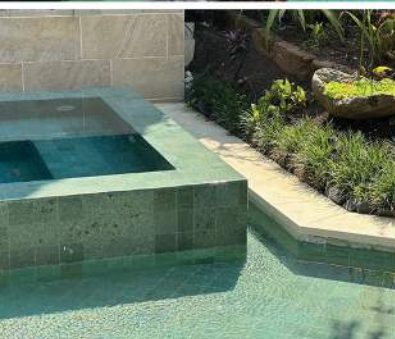

ABOUT US

Established in 2008, Pedrasverde focuses on manufacturing, processing, and exporting natural stones to several clients and suppliers worldwide. Pedrasverde is headquartered in Sukabumi, Indonesia, a landscape with rich resources of natural stones. We are flexible to supply various kinds and sizes of natural stone to suit your personal or construction needs. Further, we are committed to providing only the most exquisite material and service to our partners and clients.

For more than 15 years, we have engaged with clients and suppliers to supply building materials and natural stones from Indonesia to the world. The journey of experience and interacting with people has shaped us to be experts in product quality. We guarantee customers' satisfaction with our high-quality products. Let's build your future projects together!

There are a variety of finishes that you can choose to suit your needs:

- Finishing type: Sawn Cut and Honed
Honed has a smoother surface, whereas sawn cut is machine-cut finishing with slight lines on its surface. Both finishings are suitable for swimming pools and interior or exterior, just depends on the individual's preference.
- Rough Finishing
If you prefer a natural look for your outdoor or indoor wall, then rough finishing is a perfect choice.

Honed
(smooth surface)

Sawn Cut
(cutting mark / lines on surface)

Pedrasverde provides several best sellers of natural stones, such as Pedra Hijau, Pedra Black Lava, Pedra Andesite, and Pedra White Limestone, etc. These stones have been used for many construction purposes, such as walls and pools, in luxury villas and hotels around the world. Our best seller stones are:

- | | |

| 6. Pedra Palimanan | |

THE PROCESS

Selection

At Pedrasverde, we select only the best quality materials for further processing. The stones are then carefully measured and cut to get the precise size for every single piece.

Packing & Stuffing

We apply an international standard system in our packing. The boxes are further strapped and double-packed in a wooden palette to ensure safety.

Shipment

Finally, the products are ready to be shipped to our clients all over the world.

WHY US

Worldwide Delivery
Shipping to every part of the world

Premium Packaging
Every piece is carefully packed in secure packages.

Quality Guarantee
We put every effort and eye to details to ensure the quality and precise size.

PEDRA HIJAU

Pedra Hijau, also known as Green Sukabumi Stone, is one of the most popular natural green swimming pool tiles. The stone is rare and exotic. Because of its uniqueness, Pedra Hijau has been used for many construction purposes, such as walls and pools, in luxury villas and hotels around the world. Pedra Hijau has natural green color. It contains a special substance called Zeolite, which could reduce ammonia, to keep water clear and fresh.

Pedra Hijau has many advantages such as:

1. Anti-slip
2. High density
3. Low absorption rate
4. High abrasion resistance
5. Strong and durable in all conditions
6. Able to keep water or surrounding cool because it does not absorb heat

PEDRA BLACK LAVA

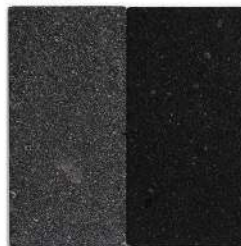

Pedra Black Lava is also known as Pedra Hitam. It is easily recognized by its shades of gray and texture. It is gray when it is dry and turns to black when it is wet. The porous surface of Pedra Black Lava makes it anti-slip and does not absorb the hot thermal. The stone is strong and durable in any weather conditions. Whether you apply it outdoors or indoors, Pedra Black Lava Stones gives a sense of nature and exclusive looks to your building construction.

PEDRA ANDESITE

Pedra Andesite is a rock that comes from a volcano. The name derives from Mount Andes. The stone is extremely durable and high density, as it is formed in high temperatures in the volcano. Andesite Stone has been popular since the colonial era. It is a commonly used andesite stone for wall cladding, gates, or fences. It is solid and resistant to weather changes.

Finishing:

- Sawn cut finishing
- Honed finishing
- High polish finishing
- Bush hammered finishing

PEDRA PALIMANAN

Pedra Palimanan is a volcanic stone formed by magma that is cooled on the earth's surface. It has a relatively high density and clean surface with lower moisture absorption and better abrasion resistance. Pedra Palimanan is widely used for wall cladding and flooring. This natural stone gives a unique texture on the surface, perfect for both interior and exterior applications. The yellowish tone will add a warm look, giving a peaceful and homey display on every side of your house.

PEDRA TRIBECA

Pedra Tribeca white marble is a stunning and pristine natural stone celebrated for its pure white appearance and crystalline texture. When light interacts with the stone's surface, the crystals create a subtle shimmering effect like natural sparkle. This crisp and immaculate white hue evokes a sense of purity, elegance, and timelessness. The white background serves as a blank canvas that can enhance various design styles, from minimalist modern aesthetics to more intricate and ornate designs. Pedra Tribeca white marble is highly in use by homeowners and designers.

INSTALLATION TIPS

If you've chosen one of these natural stones for your projects, here are some useful installation tips:

Using the right adhesive

Using the wrong adhesive can cause tiles not only to lift over but could also cause a hazard. You may need to consider your choice of grout to accommodate and we recommend adhesives that do not contain water.

Waterline sealant

Natural stone tiles do not require sealing if it is being used in dry areas, such as for garden landscaping or indoor construction. However, if you're using natural stone tiles for outdoor, such as pool, you must seal the tiles at the waterline. Ensure the tiles are clean and dry before applying the sealant, and keep the tiles away from water or extreme conditions for approximately 12 hours following.

Clean surface

When installing Pedra Hijau or any other natural stone tiles, your surface should be clean, and removed from any existing coating such as paint or wax.

Natural stone expands

All natural stone tiles expand when hot and contract when cool. When these natural tiles are, it is important not to leave them in the sun beforehand, as they can expand by several millimeters. For example: when you prepare your pool or work area, make sure it is also sheltered so that your tiles are not accidentally subjected to extra heat. Remember to lay with movement joints to accommodate expansion and contraction.

Make the most of natural color variations

One of the advantages of using natural stone tiles is that no two pieces are ever the same. Whether creating a Pedra Hijau wall or designing a water feature - you'll be guaranteed a beautiful blend of green shades.

Covering after installation

Once you've installed your tiles, it's important that you protect them from water (including rain) for several hours, and we recommend keeping them out of direct sunlight for a period of 12 hours. If you're creating a pool, it's advisable to fill it as soon as possible to protect the stone from the elements.

MAINTAINING NATURAL STONES TILES

How to clean and maintain natural stone tiles

Material crumble

This issue appears after installation when the material crumbles on the surface of Pedra Hijau. This problem can be minimized by the material selection after the cutting process by water testing control in the factory. This typical problem normally comes from the crystal color base that contains clay inside the stone.

Muds

It is easy to clean mud from the stone. You only with a nylon brush or a soft plastic.

Yellow spot or color-changing

The most common problem on Pedra Hijau is the yellow spot. There are 2 types of spots: The permanent stain (from the stone itself) is natural and cannot be cleaned. Another one is a yellow stain which is caused by storing, can be cleaned. This stain usually arises from the oxidation of the stone and oxygen

How to clean yellow spots:

- Use a ceramic cleaner that is mixed with water. The ratio is 25% ceramic cleaner and 75% water.
- Pour the liquid on the yellow spot surface or just dip the stone fully in the liquid.
- wait for 1-2 minutes and brush it with a soft nylon.
- Finally, clean thoroughly under running water

To avoid these common problems, always choose a professional supplier that provides high-quality stones. At Pedrasverde, we work hard to control our products to ensure you get high-quality products.

Order samples today and see how these beautiful natural stone tiles can transform your projects.
